APPLICATIONS DEVELOPED

List To Table – Waitlist and table check-in service app

[Live](#) | [GitHub](#)

- Two interface app with Desktop and mobile view interfaces for both restaurant and customers.
- Implemented **ReactJS**, **JavaScript**, and **JSX** to give web portal functionality to display current busy-times and waitlist data retrieved from **MySQL** database.
- Collaborated with large, diverse teams of developers to coordinate client-side calls through **Axios** to a **PHP** backend tying into a **MySQL** database.
- Utilized **Node.JS** backend to serve text-message service calls using Twilio.
- Implemented UI using **Flex/CSS3/Materialize** and focused on enhancing UX on web portal.
- Employed Agile methodology with ideation, scrums, and sprints to achieve an MVP, add features, and fix bugs.

Buzzer Eater – Sports Bar finder and NBA Scoreboard app

[Live](#) | [GitHub](#)

- Utilized **JavaScript**, **jQuery**, and **AJAX** calls to Google Maps API, Zomato Restaurants API and NBA Data API to search for nearby sports bars and also display restaurant reviews and current NBA game scores.
- Applied **HTML5**, **CSS3**, and **Materialize** to create mobile responsive framework.

Budget Tracker – Financial spending tracker app

[Live](#) | [GitHub](#)

- Employed **JavaScript** and **jQuery** to manipulate data and the DOM.
- Deployed **Firebase** backend to store data received from AJAX calls.
- Utilized **AJAX** calls to **MySQL** database to retrieve **JSON** information on **PHP** server.
- Used **HTML5** to create basic skeleton, **CSS3**, and **Bootstrap3** to aide in mobile responsiveness.
